## ENERGY STAR Qualified Heating Equipment

### JUST ONE OF THE ENERGY-SAVING FEATURES BUILT INTO GUIDA CONSTRUCTION'S ENERGY STAR QUALIFIED HOMES

Guida Construction's ENERGY STAR qualified homes are equipped with properly-sized ENERGY STAR qualified heating equipment. These energy-saving units can lower your utility bills, increase comfort, and improve your home's durability.

### BENEFITS OF ENERGY STAR QUALIFIED HEATING EQUIPMENT

- Energy Savings.

Our ENERGY STAR qualified boilers have an annual fuel utilization efficiency (AFUE) rating of 94.5 percent, making them at least 18 percent more efficient than standard models.

- Lower Utility Bills.

Because they use less energy to keep your home comfortable, ENERGY STAR qualified heating systems can save you money on your home heating bills each month.

- Increased Durability.

ENERGY STAR qualified heating systems have advanced technologies and use high quality components, often resulting in longer equipment life.

### PROPER INSTALLATION

Choosing ENERGY STAR qualified heating equipment is only half the story. To ensure that your system operates at peak efficiency, proper installation is essential. That's why Guida Construction uses installation procedures recommended by the U.S. Environmental Protection Agency's (EPA's) ENERGY STAR program, including:

- Proper System Sizing.

We use sophisticated computer software to calculate how much heating your home really needs and install the right size equipment to meet those needs. We also size your home's duct system to ensure that it delivers comfort.

- Mechanical Ventilation.

We install a well-designed mechanical ventilation system in our ENERGY STAR qualified homes to provide you consistent fresh air flow through all seasons of the year.

### Our Partnership with ENERGY STAR

We are proud to partner with EPA's ENERGY STAR program. Over our 5 years of partnership, we have-

- built 15 ENERGY STAR qualified homes.
- prevented 79,770 pounds of CO<sub>2</sub> emissions annually.
- saved homeowners \$4,500 on energy bills annually.

Homes that earn the ENERGY STAR prevent greenhouse gas emissions by meeting strict energy efficiency guidelines set by the U.S. Environmental Protection Agency.
